### About nil-mrt

Posted on: 13 November 2014 By: admin

Micro Reactor Technology (MRT) has a very promising future as it is sustainable, safe and green. It will have impact on the way we approach chemical processes and will have implications from a business point of view. MRT will have consequences in the field of education for students and professionals as they need to oversee this new technology and learn how to get the best out of it.

This site is aimed at all those that have an interest in MRT. It is a meeting place for education and business, for starters and professionals. This is the place where you can find educational
